Central Coast Internet is now providing Residential High-Speed Wireless Internet Access services in selected areas.

We offer four service levels:

Chrome	Up to 128 kbps	\$19.95 per month
Bronze	Up to 256 kbps	\$29.95 per month
Silver	Up to 512 kbps	\$34.95 per month
Gold	Up to 1.0 Mbps	\$39.95 per month

Each connection comes with up to five email boxes. If you need more, let us know.

Reliable – We have designed this system from the very beginning to be a bulletproof, always-on high-speed network. We use redundant links to improve fault tolerance so that if something fails, your connection isn't interrupted.

Symmetrical Connections – The upload speed and download speed is the same. Most so-called high-speed Internet connections are asymmetrical. They download at a high speed but upload at a slow speed. That way they can advertise a 1 MB connection when in reality, you get 1 MB download and 128 kb upload. It costs much less to provide asymmetrical connections.

Quality Of Service (QOS) – The network that we have behind our wireless connection is designed with VoIP in mind. VoIP (Voice over IP) is an extremely demanding application. Our network is provisioned end-to-end with the networking protocols and bandwidth necessary to provide clear, reliable low-latency telephone conversations over the Internet.¹

Support – We have been providing Internet services in San Benito County since February 2000. We answer the phone with a live person from 8:00 a.m. to 11:00 p.m. seven days a week.

Cost – We have worked hard at keeping our costs down so that we are able to provide high quality service at a very competitive price.

Standard Installation - \$249 Includes Tranzeo® CPQ (Contains radio, antenna and router), Ground rod (when required), Bracketing, Ethernet and ground cable, wall-mounted jack, patch cables and simple entry into building.

Residential service provides support for up to five computers on your local area network (LAN).

Please give us a call at **630-9361** to discuss this opportunity.

¹ We will be providing VoIP services in August 2006. If you would like to test our VoIP service, let us know. While most third party VoIP services should work with CCI's High Speed Internet, you should contact the third party vendor for support.
